

HOW TO CREATE A PRINT-READY FILE - BANNER STANDS

The following instructions will help you create a print-ready file. If after reading them you are still unsure about anything, please visit the FAQ section of our website, request a professional File Check or contact customer services.

1 FILE FORMAT

Send your file in PDF format in 1:1 scale (not password protected).

2 COLOUR

All files should be sent in CMYK (cyan, magenta, yellow, black), with embedded colour profile.

Images in RGB or with PANTONE colours will be converted automatically using a standard colour separation profile.

3 RESOLUTION

The optimal resolution for the print files is between 100 and 150 dpi.

4 TEMPLATE

Always download the template for the product you purchased from the website and use it as the basis for positioning your artwork: this will make it easier to create a print-ready file. On the template you will find the bleed of 1 mm per side already set up.

Insert your artwork on the 'Artwork' layer, delete all the guidelines and save the file as a PDF.

WARNING: Do not alter the scale of the design, and do not resize the template. Do not use the spot colours Artios_Cut, Artios_Taglio and Artios_Crease in the file, as they will not be printed.

WARNING: Do not place important artwork outside the safe area, as it will not be clearly visible on the finished product.

5 ADDITIONAL INFORMATION

The minimum line width is 0.5 pt. The minimum printable font size is 12 pt. We do not advise placing frames and passepartouts too close to the edges, to avoid any inaccuracy due to the cutting tolerances.
